Contents

Preface		vii
Chapter 1.	**The Natural History of Visual Pigments: 1990** F. CRESCITELLI	1
Chapter 2.	**Primary Photochemical Events in the Rhodopsin Molecule** T. YOSHIZAWA and H. KANDORI	33
Chapter 3.	**Probing the Visual Pigment Rhodopsin and its Analogs by Molecular Modeling Analysis and Computer Graphics** T. MIRZADEGAN and R. S. H. LIU	57
Chapter 4.	**Effects of Light History on the Rat Retina** J. S. PENN and R. E. ANDERSON	75
Chapter 5.	**Inositol Lipid Pathway in Fly Photoreceptors: Excitation, Calcium Mobilization and Retinal Degeneration** B. MINKE and Z. SELINGER	99
Chapter 6.	**Ageing of the Retinal Pigment Epithelium** M. BOULTON	125
Chapter 7.	**The RPE: A Model System for Disease Expression and Disease Correction. The Use of Inherited Mutations of the Lysosomal System to Probe RPE – Matrix Interactions** G. D. AGUIRRE and L. E. STRAMM	153
Chapter 8.	**What do Amacrine Cells do?** I. G. MORGAN	193
Chapter 9.	**Membrane Properties of Distal Retinal Neurons** E. M. LASATER	215
Chapter 10.	**Functional Roles of Dopamine in the Vertebrate Retina** P. WITKOVSKY and A. DEARRY	247
Chapter 11.	**Neuroregulatory Functions of Adenosine in the Retina** C. BLAZYNSKI and M.-T. R. PEREZ	293

Chapter 12. **Fibroblast Growth Factors in the Retina** 333
D. HICKS, K. BUGRA, B. FAUCHEUX, J.-C. JEANNY, M. LAURENT, F. MALECAZE, F. MASCARELLI, D. RAULAIS, Y. COHEN and Y. COURTOIS
